

Daily Safety Checklist

Revolving Door

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Walk toward the door at a normal pace. The door should begin rotating when you are about 3 to 4 feet from the door.
2. Stand motionless in the far-right side of the throat opening. The door should stop rotating when the wing approaches your body. Repeat for the other throat opening.
3. Step in front of the rotating wing. The door should stop or slow as it approaches your body.
4. Repeat step 3 for each wing.
5. Press each slow speed switch and verify the door slows for at least one complete revolution.
6. Press each emergency stop switch and verify the door stops.
7. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
8. Inspect door's overall condition. The appropriate signage should be present.
9. HAVE DOOR INSPECTED BY AN AAADM INSPECTOR AT LEAST ANNUALLY.

DO NOT USE DOOR if it fails any of these safety checks or if it malfunctions in any way.
Call your qualified automatic door service company to have door serviced or repaired.
